

SSCN143GS8

NPN Type Digital Transistor (built-in resistors)

➤ Features

VCC	VIN	IO	R2/R1 Typ.
50V	-5~+30V	100mA	10

➤ Description

Built-in bias resistors enable the configuration of an inverter circuit without connecting external input resistors (see equivalent circuit).

The bias resistors consist of thin-film resistors with complete isolation to allow negative biasing of the input. They also have the advantage of almost completely eliminating parasitic effects. Only the on/off conditions need to be set for operation, making the device design easy.

➤ Applications

- Amplifying signal
- Electronic switch
- Oscillating circuit
- Variable resistance
